Levhita (*Argel Arias*)
Sr. Full Stack Web Developer

About

JavaScript, Node.js, React, Vue, PHP, Linux, Etc.. | 20 Years of Expertise.

Contact: LinkedIn | levhita [at] gmail.com

I'm a seasoned Full Stack Web Developer with a passion for crafting innovative and user-friendly digital solutions. With 19 years of hands-on experience, I have worked with JavaScript, Typescript, Node.js, React, Vue, PHP, Linux, and their related technologies.

Throughout my career, I have successfully delivered numerous end-to-end web applications, employing my knowledge in both front-end and back-end development. I excel at creating dynamic and responsive user interfaces using JavaScript frameworks like React and Vue (along with their server side counterparts Next and Nuxt)

Started working with the dawn of the dynamic web, I have seen everything come and pass, from the days where you had to write your own PHP frameworks and there was no Ajax, to our current days where JS actually has parallel processing and is surprisingly good for processing large quantities of batch data.

Main Experience

Sr. Web Solutions Engineer
Aug 2023 - Present
Incode Technologies

Solutions Enginneer in charge of helping customers to properly integrate with Incode's platform, constantly running deep dives into the different client's code bases and solving any issue that might impact their integrations security, performance, conversion or fraud metrics

Sr. Full Stack Engineer
Mar 2020 - Jun 2023 · 3 yrs 4 mos
PhotoShelter

Front-end Engineer with a foot in the servers: Established along with my coworkers the framework of the new products soon to be launch, from the continuous integration pipeline to tools for the developers and the actual Frontend of them in React, Nextjs, React Query, StoryBook, PM2, Jest, etc...

Sr. Full Stack Engineer
Sep 2018 - Feb 2020 · 1 yr 6 mos
AgaveLabs/Datometry

Worked in the Frontend and Backend for a product that helps to migrate large legacy/mainframe databases into the cloud, allowing the user to load gigabytes of database logs into our UI for further processing in the core backend for compatibility diagnosis.

Chief Technology Officer
Dec 2015 - Apr 2018 · 2 yrs 5 mos
Poolpy

Poolpy was a customer analytics tool for sports teams, we help the organization to move the fans trough the marketing funnel by putting together all their data sources in one place, were in turn it can be activated in marketing campaigns.

There I ran the product development process and our server infrastructure, while we presented the product and adapted it for different prospects in search of investement in the Bay Area.

Sr. Full Stack Engineer
Jun 2012 - Jul 2015 · 3 yrs 2 mos
Internet Brands

Sr. Web Developer in charge of weird requests, hired as Sr. PHP Developer but in reality doing Javascript and PHP backend.

President
Jan 2011 - May 2013 · 2 yrs 5 mos
HackerGarage

Founder and President of HackerGarage. A HackerSpace in Guadalajara Jalisco.

Sr. Full Stack Engineer
Dec 2011 - Apr 2012 · 5 mos
MadeInSocial

A little startup that aims to create a Social CRM, aggregating the information from at least Twitter and Facebook in order to give assistance and a favorable image of the client on social networks.

Used MongoDB, PHP, MySQL, CSS, Javascript, HTML, Twitter API, Bash, Linux, etc..

Head of IT
Aug 2007 - May 2011 · 3 yrs 10 mos
Oficina Coordinadora de Riesgos Asegurados

A national company that search stolen vehicles with the help of the police, with people traveling all over the country constantly.

Here I did LAMP application development (with a little bit of PHP-GTK), Sysadmin, Computer Maintenance and Administration.

Basically a Do-it-all, but strongly directed towards intranet programming, given that the employees where in the road all the time.A national company that search stolen vehicles with the help of the police, with people traveling all over the country constantly. Basically a Do-it-all, but strongly directed towards intranet programming, given that the employees where in the road all the time.

Sr. Full Stack Engineer
Jul 2006 - Nov 2006 · 5 mos
Logistica Dynamica

Development of an application that allows the revision of inventory and movements to the clients, via web (It's a warehouse company), using a MSSQL backend. It Offered an excellent opportunity to take my Framework to the limits of it's own practicality.

Specially notable a fully customizable report system that left me with an Interactive-DigItUp view on reports (against static, not interactive one level reports that I used to see everywhere before that)

Sysadmin of various flavors of servers; Suse, Debian and Slackware; a Mix of flavors which by the way I was never so thrilled about, but allowed me to experiment with them in a 24/7 environment.

Other Experience

Sr. Javascript Trainer
Apr 2018 - Sep 2018 · 6 mos
Laboratoria

Sr. Full Stack Engineer
Aug 2015 - Oct 2015 · 3 mos
Entryless

Teacher
Jan 2007 - Apr 2007 · 4 mos
Escuela Profesional de Desarrollo Integral
